INTÉGRÉS

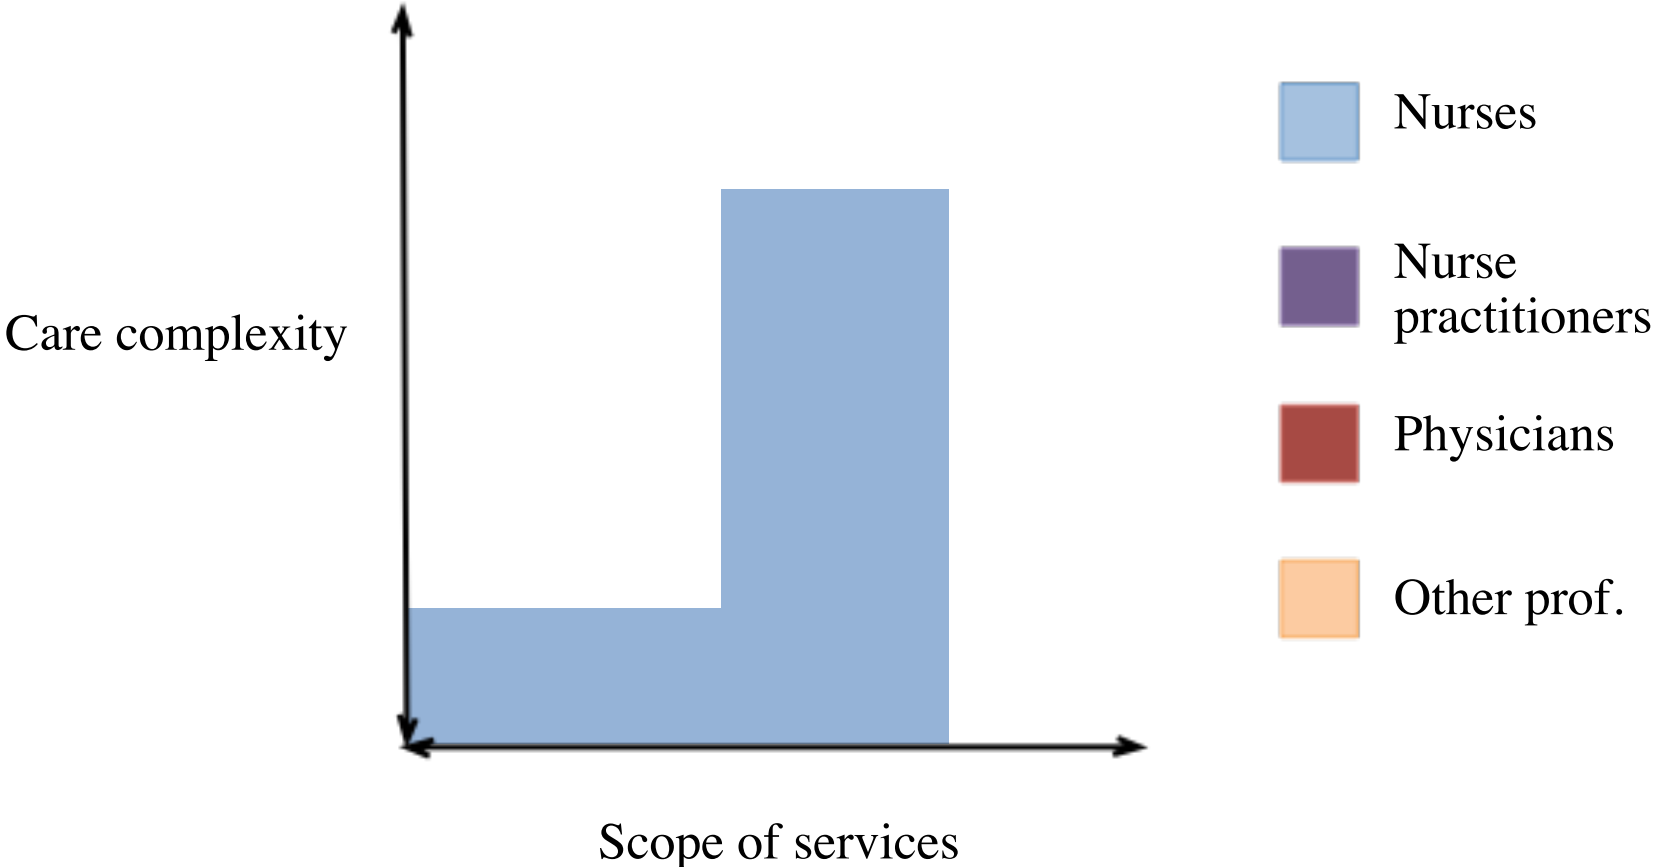

Methods

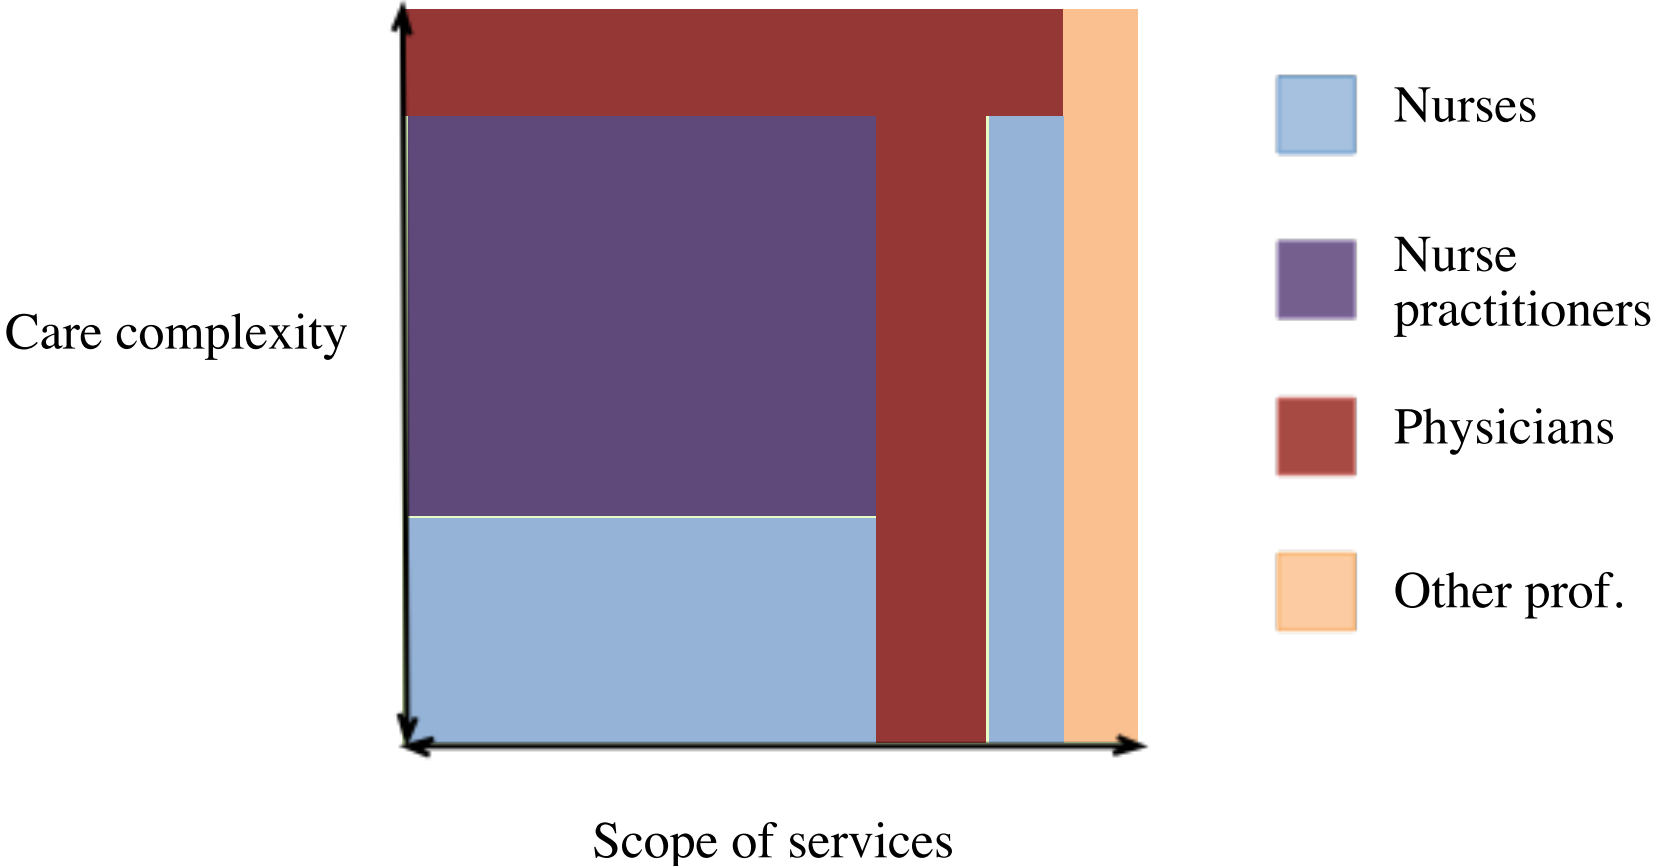

- Keyword-based search of the usual sources (CINAHL, MEDLINE, EMBASE)
- Triage according to relevance on title / abstracts from 2401 documents down to 71 for full text review and final selection of 56 for analysis
- Reverse logic-analysis of the content to understand structure and processes leading to desirable outcomes (a.k.a modified realist review approach)

1st idea

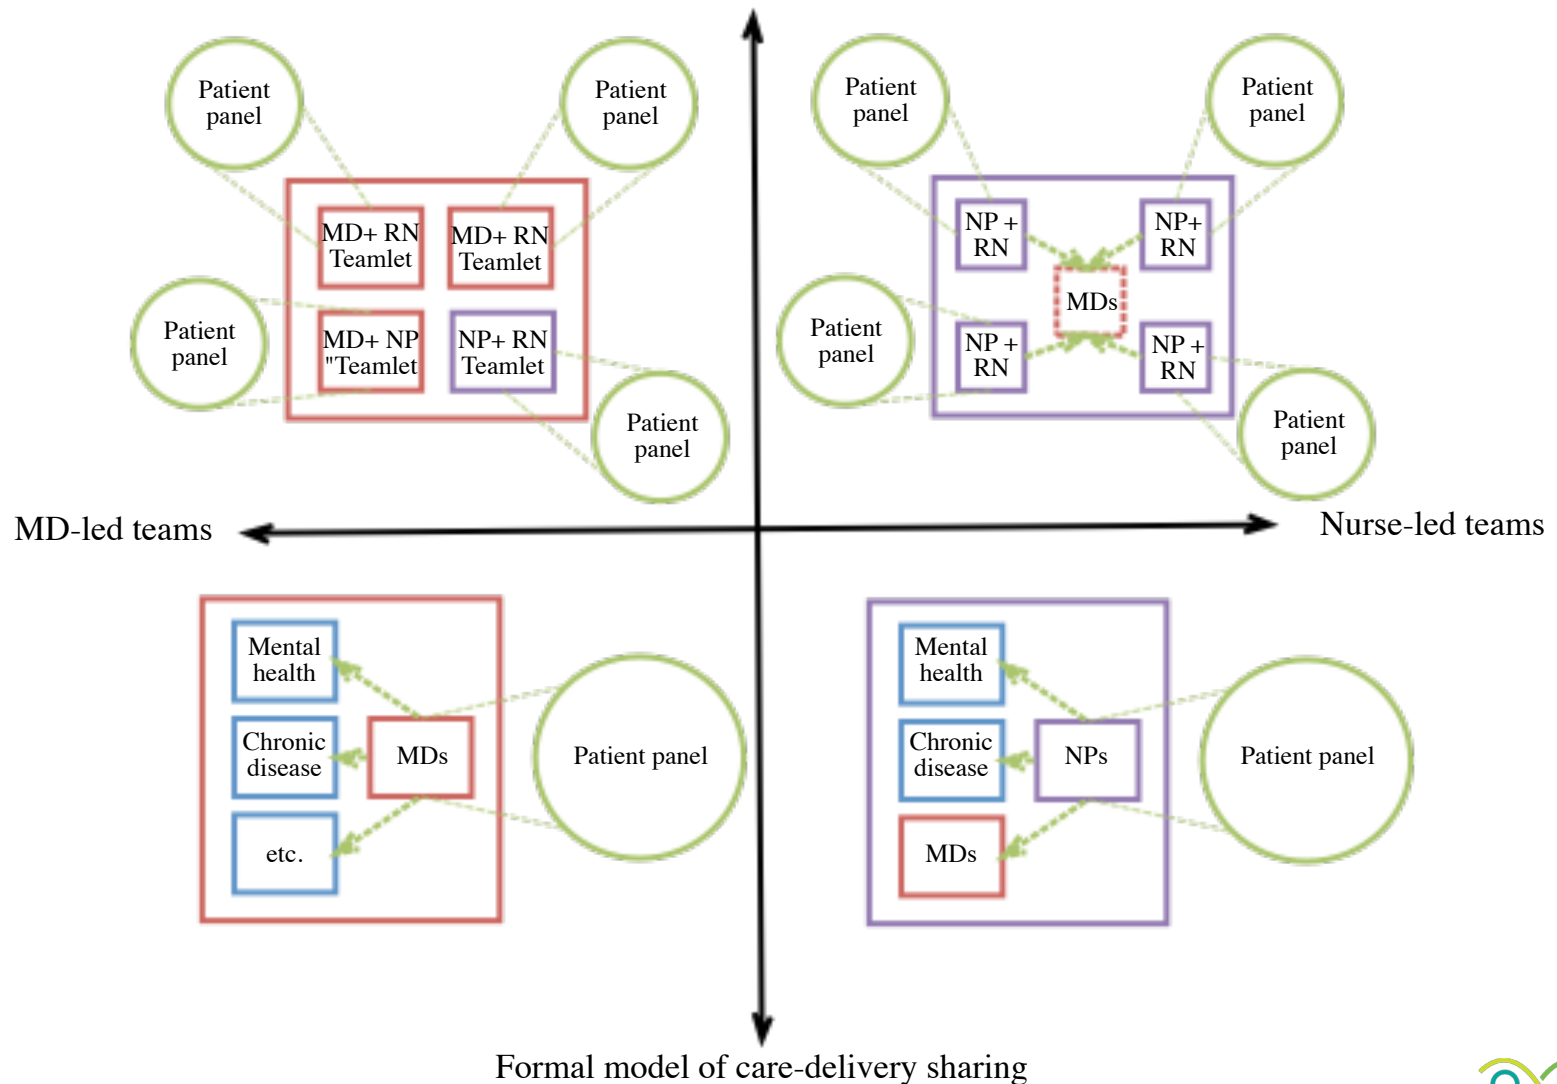

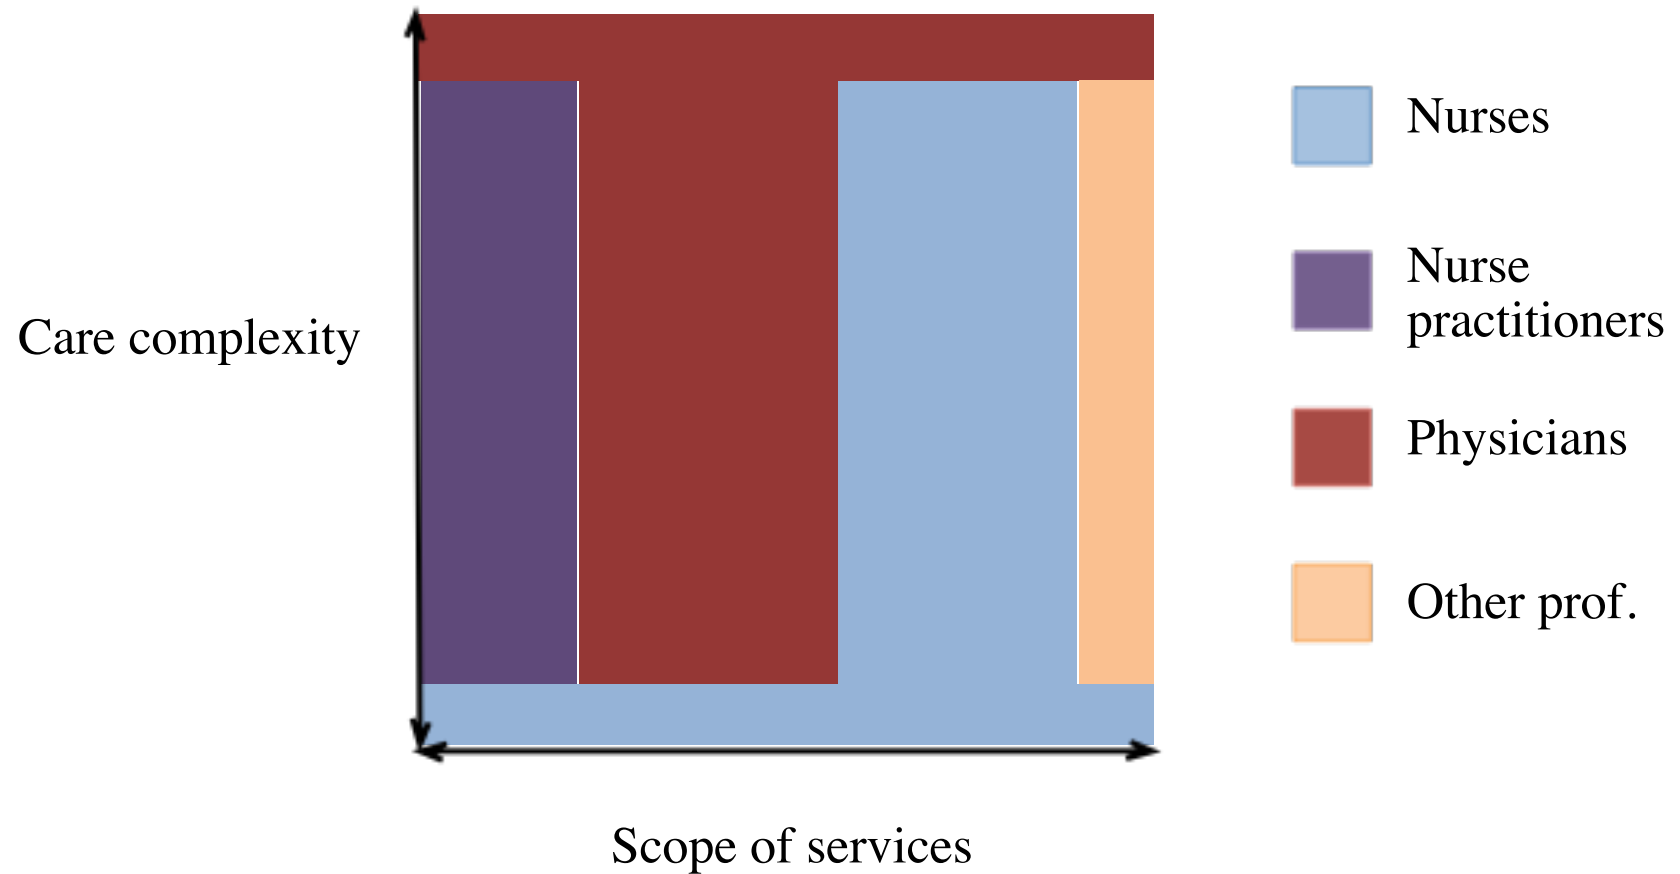

2nd idea

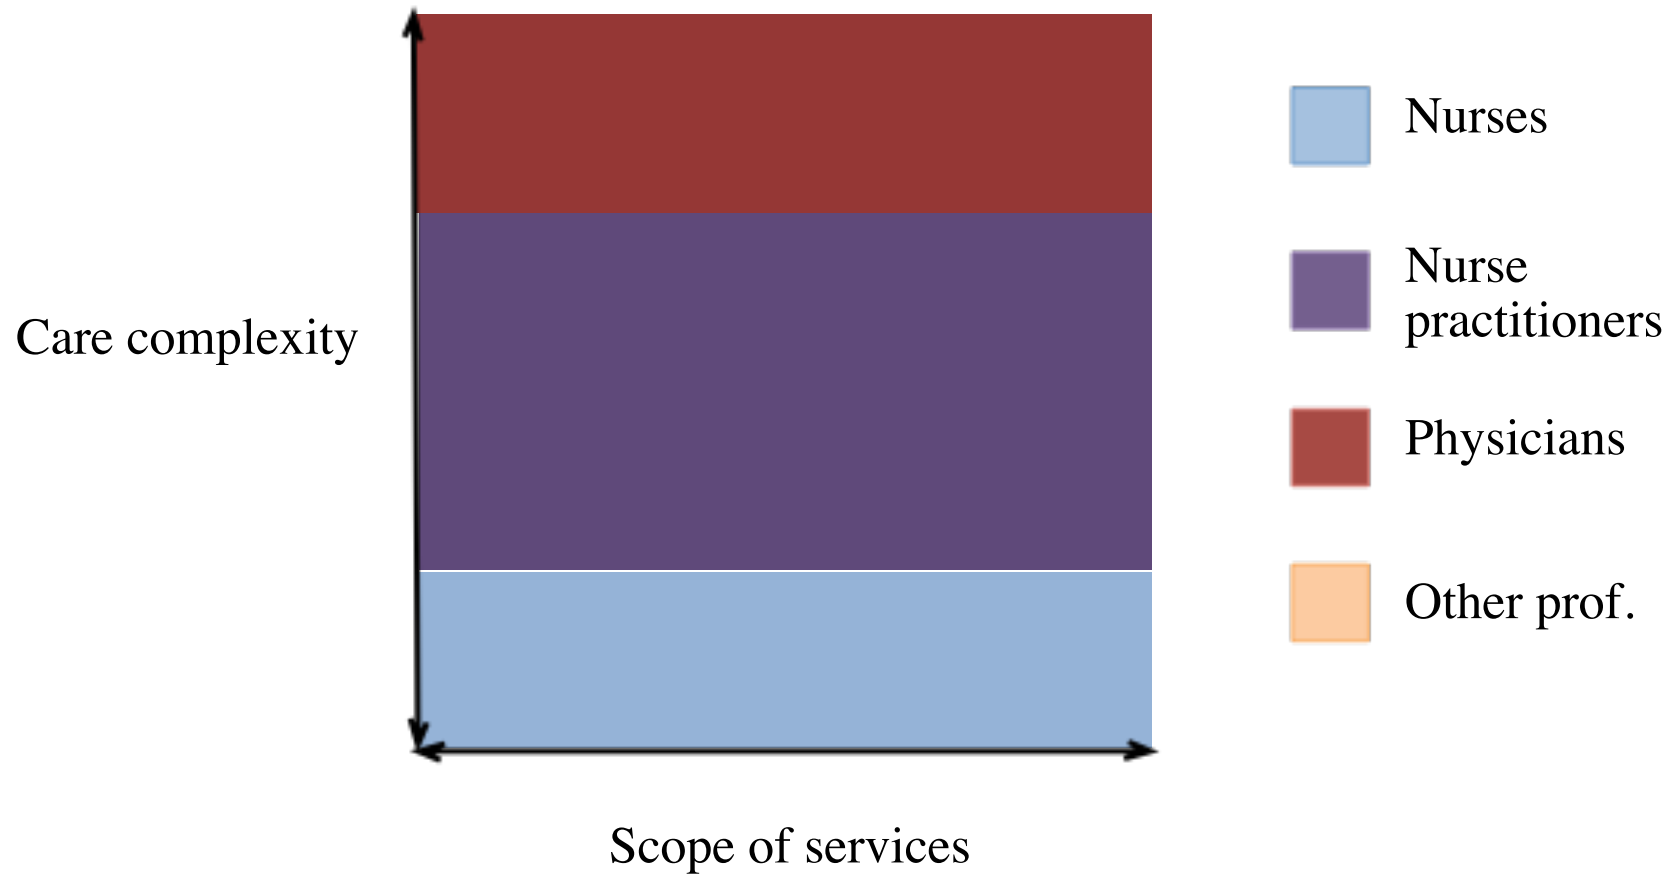

Organic model of care-delivery sharing

Vertical Tetris®

Horizontal Tetris®

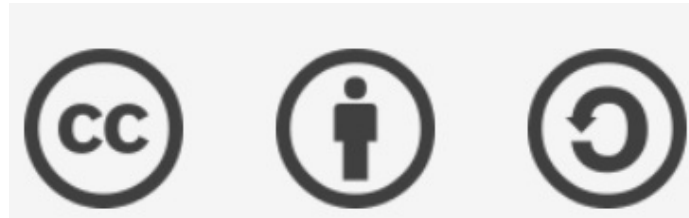

But the real question is how...

... to drive simultaneous evolution of

- legislation and regulation regarding professional scope of practice
- role definition in teams
- definition of what is the "care" in primary care
